distinguishing between sustainable development and sustainable tourism the authors examine whether and in what form tourism can contribute to sustainable development and growth focusing on different types of tourism appropriate to particular situations the team of leading contributors draws on examples from around the world canada usa spain belgium uk australia to

explore tourism's contribution to the economic, social, political, and environmental advancement of developing countries and the importance of tourism in industrialised nations. This book examines the new policies and initiatives established by both the private sector and the state to pursue sustainable tourism growth and identifies the opportunities and challenges inherent in achieving it.

This book gathers contributions from scientists and industry representatives on achieving a sustainable bioeconomy. It also covers the social sciences, economics, business, education, and the environmental sciences. There is an urgent need to optimise and maximise the use of biological resources so that primary production and processing systems can generate more food, fibre, and other bio-based products with less environmental impacts and lower greenhouse gas emissions. In other words, we need a sustainable bioeconomy, a term that encompasses the sustainable production of renewable resources from land, fisheries, and aquaculture environments and their conversion into food, feed, fibre, bio-based products, and bio-energy, as well as related public goods. Despite the relevance of achieving a sustainable bioeconomy, there are very few publications in this field addressing that gap. This book illustrates how biological resources and ecosystems could be used in a more sustainable, efficient, and integrated manner. In other words, how the principles of sustainable bioeconomy can be implemented in practice. Given its interdisciplinary nature, the field of sustainable bioeconomy offers a unique opportunity to address complex and interconnected challenges while also promoting economic growth. It helps countries and societies to make a transition and to use resources more efficiently and shows how to rely less on biological resources to satisfy industry demands and consumer needs. The papers are innovative, cross-cutting, and include many practice-based lessons learned, some of which are reproducible elsewhere. In closing, the book prepared by the Inter-University Sustainable Development Research

programme iusdrp and the world sustainable development research and transfer centre wsd rtc reiterates the need to promote a sustainable bioeconomy today
